Screening, Brief Intervention, and Referral to Treatment (SBIRT)

A Comprehensive Public Health Approach
Screening, Brief Intervention, and Referral to Treatment (SBIRT) is a comprehensive public health approach for delivering early intervention and treatment services to people with, or at risk of developing, substance use disorders. Healthcare providers using SBIRT ask patients about substance use during routine medical and dental visits, provide brief advice, and then, if appropriate, refer patients who are at risk of substance use problems to treatment. Release of the Institute of Medicine report *Broadening the Base of Treatment for Alcohol Problems* provided recognition that alcohol and drug abuse occur along a continuum of both level of consumption and consequences. This recognition is illustrated by a treatment pyramid (shown above) that has been developed to depict the role of SBIRT in addressing needs across the continuum of use.

Studies show the need for a tool such as SBIRT:
- Results of the most recent National Survey on Drug Use and Health (NSDUH) show that an estimated 22.1 million people aged 12 or older have a diagnosable alcohol or illicit drug use disorder.²
- In 2010, according to NSDUH, 8.1 percent of the population aged 12 or older – about 20.5 million people – needed but did not receive substance use treatment at a specialty facility in the past year.³
- In 2006, excessive drinking cost the United States $223 billion.⁴ Factoring in public health, public safety, and lost productivity, illicit drug use cost the Nation an estimated $193 billion in 2007.⁵

Elements of SBIRT
Healthcare practitioners have the important responsibility of looking after their patients’ general health and welfare. In this role, they must be vigilant in identifying a host of potential health problems. It is critical, therefore, to focus resources and efforts on expanding the continuum of care health practitioners provide for their patients.
With SBIRT, substance abuse screening is incorporated into mainstream healthcare settings, such as college health clinics, hospitals, trauma centers, and dental clinics, as well as into tribal and military healthcare settings. Practitioners screen patients to assess substance use, then, based on the screening results, provide the appropriate intervention.

SBIRT is a four-part process:

- **Universal screening** assesses substance use and identifies people with substance use problems.
- **Brief intervention** is provided when a screening indicates moderate risk. Brief intervention utilizes motivational interviewing techniques focused on raising patients’ awareness of substance use and its consequences and motivating them toward positive behavioral change.
- **Brief therapy** continues motivational discussion for persons needing more than a brief intervention. Brief therapy is more comprehensive and includes further assessment, education, problem solving, coping mechanisms, and building a supportive social environment.
- **Referral to treatment** provides a referral to specialty care for persons deemed to be at high risk.

A key aspect of SBIRT is the integration and coordination of screening, early intervention, and treatment components into a system of care. This system links community health care and social service programs with specialty treatment programs. In each of the SBIRT grantee programs, healthcare professionals and clinical support staff conduct universal screening that targets risky to harmful use, thereby helping to reduce the number of people who move from substance use to addiction.

### History of the Federal SBIRT Program

In 2003, the Federal Government established the SBIRT grantee program within the Substance Abuse and Mental Health Services Administration’s (SAMHSA’s) Center for Substance Abuse Treatment to implement SBIRT services in primary care and community health settings for adults with substance use disorders (see grantee map at right). To date, SAMHSA has fully or partially funded four portfolios for SBIRT grantees: (1) SBIRT Cooperative Agreements to Single State Authorities (SSAs) for Substance Abuse Services; (2) SBIRT implementation on college campuses; (3) a pilot project for SBIRT implementation within Federally Qualified Health Centers (FQHCs); and (4) SBIRT implementation within medical residency programs. These real-world implementations build on findings of more than 100 research studies conducted over the past 30 years that have supported development of reliable screening tools, empirically proven brief interventions, and implementation and technology transfer research.

### Effectiveness of SBIRT

Research on SBIRT’s effectiveness for alcohol and drug problems indicates the approach clearly leads to short-term health improvements and, though not fully demonstrated, may also yield substantial long-term benefits. One study found that, in some instances, a brief motivational intervention appears to facilitate abstinence from heroin and cocaine use at a 6-month follow-up interview, even in the absence of specialty addiction treatment.
Data from SAMHSA grant programs\textsuperscript{10} help demonstrate the impact of SBIRT on patient health through documented:

- Reduction in alcohol and drug use 6 months after receiving intervention (41 percent of respondents reported abstinence from drugs and/or alcohol at follow-up, compared to just 16 percent at baseline);
- Improvement in quality-of-life measures, including employment/education status, housing stability, and 30-day past arrest rates (95 percent of respondents reported no arrests in the past 30 days at follow-up, compared to 88 percent at baseline); and
- Reduction in risky behaviors, including fewer unprotected sexual encounters (injection drug use decreased from 3.2 percent at baseline to 1.5 percent at follow-up).

SBIRT also reduces the time and resources needed to treat conditions caused or worsened by substance use, making our health systems more cost-effective.\textsuperscript{11} For example, participants in the Washington State Screening, Brief Intervention, and Referral to Treatment (WASBIRT) program who received a brief intervention experienced a reduction in total Medicaid costs ranging from $185-$192 per month. Participants admitted as hospital inpatients after emergency department visits saw reductions in associated costs ranging from $238-$269 per month.\textsuperscript{12}

### Seeking Local Solutions

State and local level actions:

- Healthcare professionals can learn screening techniques to identify patients with, or at risk for, substance use problems and talk to them about consequences and behavioral change. To learn more about SBIRT, visit [www.integration.samhsa.gov/clinical-practice/sbirt](http://www.integration.samhsa.gov/clinical-practice/sbirt).
- More training can be made available to primary healthcare providers and staff to ensure fidelity to evidence-based practices such as SBIRT. Training and webinars on SBIRT are available at [www.integration.samhsa.gov/clinical-practice/sbirt](http://www.integration.samhsa.gov/clinical-practice/sbirt).
- Parents can talk to their children about the consequences of alcohol and illicit drug use. Advice and information about teen drug use is available online at [http://www.theantidrug.com](http://www.theantidrug.com).
- Community anti-drug coalitions can apply for Federal grants through ONDCP’s Drug Free Communities Support Program ([http://www.whitehouse.gov/ondcp/drug-free-communities-support-program](http://www.whitehouse.gov/ondcp/drug-free-communities-support-program)).

### Codes for Reimbursable SBIRT Services

The chart below lists codes approved by the American Medical Association (CPT Codes) and the Centers for Medicare and Medicaid Services (G and H Codes) to be used by healthcare practitioners for reimbursable SBIRT services.\textsuperscript{13}

<table>
<thead>
<tr>
<th>Payer</th>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Commercial Insurance</strong></td>
<td>CPT 99408</td>
<td>Alcohol and/or substance abuse structured screening and brief intervention services; 15 to 30 minutes</td>
</tr>
<tr>
<td></td>
<td>CPT 99409</td>
<td>Alcohol and/or substance abuse structured screening and brief intervention services; greater than 30 minutes</td>
</tr>
<tr>
<td><strong>Medicare</strong></td>
<td>G0396</td>
<td>Alcohol and/or substance abuse structured screening and brief intervention services; 15 to 30 minutes</td>
</tr>
<tr>
<td></td>
<td>G0397</td>
<td>Alcohol and/or substance abuse structured screening and brief intervention services; greater than 30 minutes</td>
</tr>
<tr>
<td><strong>Medicaid</strong></td>
<td>H0049</td>
<td>Alcohol and/or drug screening</td>
</tr>
<tr>
<td></td>
<td>H0050</td>
<td>Alcohol and/or drug service, brief intervention, per 15 minutes</td>
</tr>
</tbody>
